

# Original Yacker Tracker by AGI - Traffic Light Sound Monitor

---

Product Description • Traffic light is approximately 17 high. • Unit plugs into AC 120 volt electrical outlet with included UL approved transformer (Input: 100-240V AC 50-60Hz, Output: 9V DC 500mA) or can be used with 6 AA alkaline batteries (sold separately). • Unit can be self-standing or wall-mounted. • Traffic light is computerized with adjustable sound level meter. • Red light counter registers each time the red light activates. Push reset button to reset counter to zero. • Decibel sensitivity control can be set to operator's choice. Push button to decrease sensitivity. Also offers manual operation option of staying on a given light color. • Option face stickers provided to add the element of emotion to the lights. • Green light stays lit until noise in room goes above set level (determined by user, green light is replaced with a flashing yellow light as a warning. When sound level reaches 15 dB above set level, the red light and siren are activated. • Voice / Quiet / Please in 4 languages or your own recording) and siren options. User has the option of turning sounds on or off. • Delayed Alarm Function will sound when noise continues for more than 2 seconds.

---

I bought this in anticipation that I'd have a noisy class. So the first day I used it, proved its productiveness. It monitored my class while I conferenced with several students. You can adjust the volume or decibels according to the level desired. It gives warnings by a flashing yellow light before buzzing loudly. You can even alter the buzz sound in exchange for your voice. It has a recording function to record your desired phrase. It can plug-in or function with batteries. Although my class wasn't as noisy as anticipated, the Yacker Tracker is a fun and friendly classroom decor. And my class loves it! It works for me.

---

I was skeptical and didn't try it right away, but the noise level in my two pre-k classes was continuing to rise as the year went on and I was starting to get headaches. I explained how it worked to my kiddos and demonstrated it to them by setting it off by talking loudly. It wasn't long before they set it off, but they immediately lowered their voices. I raise and lower the sensitivity throughout the day based on what we're doing and there is no doubt that it is working. I have two

half day classes with 17 students each and both classes have been quieter all week with no fussing from me. In other words, I get to stop being the noise police bad guy. When it goes off, I just shrug and say, It's too noisy in here. It has made working with small groups so much easier and more effective. It is also helping them to self-monitor their voice levels between activities such as music time and quiet time. I would definitely recommend this.

---

Got for use in a lunch room - with there was an in between setting - one is too sensitive and the next level is not sensitive - also the alert sound is not very loud. Product works great and kids like it though. See all 22 customer reviews...
